
A
Cost law at ONE thread (n = 30; wide intervals)
filled + solid = GPU arm
AA CPU: 0.94 [0.82,0.98] n=17
AA GPU: 0.56 [0.51,0.64] n=17
NT CPU: 0.88 [0.82,1.02] n=13
NT GPU: 0.60 [0.53,0.78] n=13
wall time (s)
invocations x m k² r
B
Nodes shift the level (2.9x across node medians)
but the CPU-GPU exponent gap survives absorbing them
AA CPU-GPU exponent gap: +0.16 pooled, +0.13 with node effects
NT CPU-GPU exponent gap: +0.08 pooled, +0.06 with node effects
residual about the Fig. 3a fit
(log10 wall seconds)
